Titan Company Ltd(Integrity)

Duration:

May 2026 - Jun 2026

Introduction

During my internship, I worked on analyzing retail and stock data from *Taneira*. The objective was to transform raw business data into meaningful insights through interactive dashboards built using Excel and Power BI.

The project focused on understanding sales trends, inventory status, product categories, and operational status across multiple sales channels.

Objectives

- Monitor the sales performance and inventory health
- Categorise products and Analyse Return status
- Track Product arrivals and Stock status
- Identify Products with Sales despite being Out-of-Stock
- Create Interactive Dashboards with Key Performance Indicators

Tools Used

1) Excel

- Pivot Tables
- Pivot Charts
- Slicers
- VLOOKUP/XLOOKUP
- Various Excel formulas

2) Power BI

- Power Query
- Data Modelling and Relationships

- DAX and Drill downs
- Interactive pages with insights

3) SQL

- Data extraction and analysis

Dashboard Overview

Excel Dashboard focuses on sales, discounts, inventory status, and product specifications.

Key Metrics analysed:

- Revenue
- Discount contribution
- Stock Specification
- Product Categories
- Sell- through rate

Key Findings:

- WCS channel contributed to 86% of the total discount, and the average Discount is 15%
- The fastest-moving product category is Lehenga
- Product Specifications that drive the revenue
- The average inventory present per product is approx 3 units

Page 1: Sales Analysis

Page 2: Inventory Status

Inventory Dashboard

Only 39,973 units in stock across 13,336 unique products - avg 3 units per product.

Only 17.5% products are live with 99% being online.

Term	Value
Unique SKUs	13,336
Total Stock	39,973

Avg cost of product	Price
INR	₹8K
USD	\$92.13

Term	Value
Stock Ratio	24%
Categories	13

Page 3: Product Specifications

SALES DASHBOARD WITH PRODUCT SPECIFICATIONS

Cotton and Silk drive the highest revenue and Cotton has the most SKUs and Stock. Lehenga has the fastest sell-through rate (29%) but overall, the products have low sell-through rate.

Term	Value
Total Sales	3.650

Term	Value
Total Units Sold	9590

Term	Value
Total SKI2	2121

Term	Value
Stock	10073

Term	Value
Stock Ratio	24%

Power BI Dashboard focuses on sales, returns, product intelligence, inventory health, and product status.

Key Metrics Analysed:

- Revenue
- Return Status
- Payment modes and channels
- Product categorisation
- Live, Online, Enriched
- Product cost and position
- Product Arrivals and Stock Status

Key Findings:

- The highest returns are through MYNTRA, and the most commonly used payment method is Cash on Delivery
- A Return rate of 25%, which is high
- Categories like Unstitched Suit Set and Kurta are driving revenue with sarees
- Only approx 18% of the total Parent SKUs are Live. Some items have higher Stock compared to their revenue contribution
- 70 SKUs are out of stock, but have 474 quantities in total purchased, where none of them are currently Live
- 428 categorised products have arrived this season from January to May

Challenges faced

- Handling Duplicate Inventory values caused by the merged datasets
- Creating accurate relations between various tables
- Validating calculations, statistics, and KPI definitions
- Cleaning and understanding large datasets for analysis
- Ensured Dashboard metrics related to business performance

Learning Outcomes

- Data Cleaning and Understanding
- Data Visualisation
- Business Analytics
- Sales and Inventory Analysis
- Power BI Usage
- SQL querying
- Problem Solving with Real Business Data

Conclusion

The project successfully converted large volumes of sales and inventory data into actionable insights, which answer business-level questions using Excel and Power BI. The dashboards improved visualisation of product performance, inventory health, stock availability, and discount trends, making business understanding better and easier decision-making. This project provided exposure to real-world data and business analytics, where dashboard development uses industry datasets.
